Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"NMB, a novel gene, is expressed in low-metastatic human melanoma cell lines and xenografts.";
Int. J. Cancer 60:73-81 (1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Regul. Pept. (11:169-178(2003).

-: FUNCTION: Could be a melanogenic enzyme (By similarity).

-: SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-: TISSUE SPECIFICITY: Not restricted to the melanocytic lineage.

-: DEVELOPMENTAL STAGE: Expression in poorly metastatic melanoma ilnes; no expression in highly metastatic melanoma coll similarity: BELONGS TO THE PMEL-17/NMB FAMILY.

-: SIMILARITY: Contains 1 PXD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sequences."

RT "Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sequences."

RT "Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sequences."

RT "Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sequences."

RT "Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sequences."

RT "Generation and initial analysis of more than 15,000 full-length human and mouse could represent an elanocytes but overexpressed at low levels of the soluble form, ME20-5, could protect tumor cells from antibody mediated immunity.

"SUBCELLUIAR LOCATION: TYPE I MEMBRANE PROTEIN (POTENTIAL). THERE C. IS ALSO A SECRETED SOLUBLE FORM, ME20-5, PROBABLY PRODUCT OF PROTEOLYTIC CLEAVAGE.

"TISSUE SPECIFICITY: Preferentially expressed in melanomas. Some expression was found in dysplastic nevi. Not found in normal certisuses nor in carcinomas.

C. -: SIMILARITY: EDLONGS TO THE PWEL-17/NMB FAMILY.

--: SIMILARITY: Contains 1 PKD domain.

SUBCELLIDIAR LOCATION: Secreted.

TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma. DOWALN: In addition to having a high His and Pro content, this protein has many internal repeats. 12 tandem repetitions of a 5-residue sequence (GHBPH, consensus) form a histidine-rich region. SIMILARITY: Contains 2 cystatin-like domains.
                                                                                                                                                                                                                            "Plasma protein map: an update by microsequencing.";
Electrophoresis 13:707-714(1992).
-: FUNCTION: The physiological function is not yet known. It binds heme, dyes and divalent metal ions. It can inhibit rosette formation and is known to interact with heparin, thrombospondin, and the lysine-binding site of plasminogen. On the basis of its homology with HWW kininogen, the His-rich region of this protein may mediate the contact activation phase of intrinsic blood
glycoprotein (HRG) gene: genetic mapping and in situ localization of HRG to chromosome 3q28-q29.";
Genomics 19:195-197(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (POTENTIAL).

-!- TISSUE SPECIFICITY: Highly expressed in brain. Low levels found in stromach. Not detected in other tissues analyzed including adrenal gland, testis and pancreas.
-!- DOWAIN: c2 domain 1 is involved in binding calcium and phospholipids. Calcium binds with low affinity but with high specificity and induces a large conformational change.
-!- SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              10 X 10 AA TANDEM APPROXIMATE REPEATS OF P-A-K-P-Q-P-X.

"Genomic organization of the 3 region of the human MUCSB mucin.";
"J. Biol. Chem. 272:16873-16883 (1997).
-!- FUNCTION. Salivary mucin that is thought to contribute to the lubricating and viscoelastic properties of whole saliva.
-!- SUBCELLULAR LOCATION. Secreted.
-!- TISSUE SPECIFICITY: Expressed mainly in bronchus glands and also in submaxillary glands, endocervix, gall bladder, and pancreas.
                                                                        "Human mucin gene MUCSB, the 10.7 kb large central exon encodes various alternate subdomains resulting in a super-repeat. Structural evidence for a 11p15.5 gene family.";

Pred. No. is the number of results predicted by chance to have a em\_htgo\_other:\*

em\_htgo\_mus:\*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
